

ScopeMate

Vision

ScopeMate helps homeowners clearly define construction projects and helps contractors respond with better bids.

The platform uses AI to transform homeowner descriptions into contractor-ready scopes, allows contractors to improve those scopes, and eventually supports bid creation and comparison.

Core Problem

Homeowners struggle to describe renovation and construction projects.

Contractors waste time:

- Clarifying scope
- Identifying missing details
- Chasing information
- Creating bids from incomplete requirements

Solution

Create a shared project definition before pricing begins.

Homeowner describes project → AI creates scope → contractor reviews scope → homeowner approves scope → contractor submits bid.

Primary Users

Homeowners

- Create projects
- Upload photos
- Edit scopes
- Share with contractors
- Compare bids

Contractors

- Review project scopes
- Suggest missing items
- Create estimates
- Submit proposals

MVP Success Criteria

A homeowner can create a contractor-ready scope in under 10 minutes.

A contractor can review that scope and provide feedback in under 5 minutes.

Non-Goals

Do not build:

- Payments
- Scheduling
- Project management
- Permit filing
- Change order workflows
- Exact pricing engine

Focus on scope clarity first.
